### 1. Policy Statements and Procedures

### Health and Safety Policy Statement

This Business is committed to ensuring full compliance with all current versions of the Health and Safety at Work Act 2015 (HSWA), the Health and Safety at Work Regulations, Codes of Practices and any other relevant Standards, Guidelines or Legislation.

To meet this commitment, This Business will provide healthy and safe working conditions for all staff, contractors, visitors, and members of the public at this or any other company-controlled site.

This is to be achieved through commitments to:

- Consultation between management/owner, any employees, elected health and safety representatives, and staff members in health and safety management and practices in the workplace.
- Determining the scope of the OHS management system, assessing boundaries and applicability; considering external and internal issues, requirements and work-related activities performed.
- Conducting health and safety workplace and/or toolbox meetings at least quarterly. These meetings will include management/owner and any staff members, to present and review any issues. (In the case of a notifiable event see Incidents section cover page).
- Annual reviews or self-assessment of performance against health and safety responsibilities.
- Providing the appropriate training for management/owner and any staff in health and safety awareness, understanding, management and responsibilities.
- Taking all practicable steps to eliminate or minimise workplace risks and to provide all personal protective equipment for any staff to wear, where applicable.
- Providing a safe working environment for staff and others who encounter This Business or their activities.
- An annual self-assessment of the Health and Safety System, setting objectives, plans and performance measures with targets, so that there are continuous improvements to the system.
- Being committed to health and safety and aware of the responsibility to provide a safe work environment.
- Accurately reporting and recording of all workplace incidents and near misses and identifying appropriate follow-up to avoid reoccurrence.
- Supporting and promoting a safe and early return to work of any injured staff, where possible, through prompt treatment and active rehabilitation.
- Ensuring that the manager/owner has specific responsibility to coordinate health and safety in the workplace.
- Provision of resources to accomplish these goals.

### 2. Safety & Toolbox Meetings

1/04/2021

### Safety & Toolbox Meetings

### Introduction

The general purpose of health and safety meetings is to create and provide a forum where issues and incidents involving health and safety can be discussed by staff members at all levels of This Business, to ensure that those issues are managed to a standard which complies with the HSWA.

There are two main types of safety meeting: Health and Safety Committee meetings and Toolbox meetings.

The attendance at and topics discussed in both cases must be recorded and documented. The HSWA in Section 66 requires businesses to establish and hold regular meetings at no greater than three monthly intervals. They must also maintain a Health and Safety Committee in certain situations:

"The following persons may request that the PCBU at a workplace establish a health and safety committee for the business or undertaking or part of the business or undertaking:

- (a) a health and safety representative for a work group of workers carrying out work at that workplace; or
  - (b) 5 or more workers at that workplace.

The PCBU must, within 2 months of receiving a request, decide whether to establish a health and safety committee for the business or undertaking or part of the business or undertaking."

Health and Safety at Work Act 2015 Part 3 s66 ss1

### **Health and Safety Meetings**

All meetings must be recorded, and those minutes freely circulated to the staff.

Use the form on Page 2.2 to record the meeting.

OHS Meetings should be held at regular intervals e.g., the third Thursday of the month at 10:30am, and may be held monthly, bi-monthly or at the very least quarterly. Frequency may depend on items for discussion. All employees and (sub)contractors must attend regular safety meetings to discuss OHS issues.

When working on other company's sites, a safety meeting should be held prior to commencement of work, and then weekly. Should there be any significant event within the project, this would also require an additional meeting. These are generally referred to as Toolbox meetings. Use the safety meeting sheet for these. All employees and (sub)contractors must attend regular toolbox, pre-start, and safety meetings where OHS issues can be communicated.

Incidents are to be discussed at safety meetings (for incident reporting and investigation see page 3.1/2) to review how they happened, did they involve a significant risk and has the situation been resolved? Incident data is to be collated during each meeting (or at least annually) to see if there have been any trends, and if so to implement initiatives for injury prevention, where applicable.

It is important that these meetings are held in an environment where the objective is to find solutions which make the workplace safer. It is valuable to discuss findings from site inspections during safety meetings, as an agenda item.

### 3. Incidents & Emergency Procedures

### Incident Reporting and Investigation Procedures

An incident is an occurrence(s) arising out of or during work that could or does result in injury or ill health (also called an accident). An incident where no injury and ill health occurs, but has the potential to do so, may be referred to as a "near-miss", "near-hit" or "close-call".

All incidents and near-miss incidents must be investigated. The depth of the investigation is determined by the severity of the occurrence. This process applies whether the incident occurred on this site or on a customer's site.

Investigation is carried out immediately or as soon as possible after the occurrence. There may be one or more non-conformities (non-fulfillment of a requirement), or there may be no non-conformity.

The immediate supervisor and or Health and Safety Representative will carry out the initial investigation to:

- Establish the cause. Assess whether serious misconduct was involved.
- Compile an accurate record of the event. Ensure that the investigation covers a description of the site, the operation, processes, plant/equipment (including PPE), events and people present or who were involved in the accident, incident or near miss. Interview all witnesses and collect written statements.
- Carry out a complete site examination, with photographic evidence or description and/or diagrams and documentation.
- Define action, responsibility, and measures to prevent reoccurrence, within a predetermined time frame.
- Update the risk register, where necessary. Ensure it is reviewed for new risks identified because of the accident/incident/near miss and existing risk contributing factor(s) and management controls.
- Supply the manager with documents and reports, so that they can review the report, carry out any further investigation if necessary and ensure that action is taken to avoid a recurrence, then sign off the report.
- In the case of a notifiable event, ensure that any injured party and assistants cannot be subjected to further injury by (if safe and practicable) removing them to a safe distance from the cause of the incident and then have a trained first aider attend to the injured party. An ambulance should be called if there are any doubts about the severity of the injury.
- In the case of a notifiable injury, management or the Health and Safety Representative is required to contact the nearest WorkSafe NZ office as soon as is practicable. (Or at least within 24 hours).
- DO NOT alter or move any machinery or equipment (unless it may cause immediate danger to others) and tape off the area of the incident. Machinery or equipment cannot be used again until it has been cleared by WorkSafe NZ.
- Notifiable Event forms must be filled out and sent to WorkSafe NZ within seven days. This can be done by completing the appropriate online notification form <u>worksafe.govt.nz/notify-worksafe</u>
- Make enquiries as to the extent of the injuries and of the potential of any long-term effects.

We will also notify other relevant PCBUs where required, when an incident occurs on their site and we are involved. We will do this by making telephone contact with the designated staff member or their supervisor, if unavailable.

Process to Review a Critical Event and/or a Change in Work Procedures or Policy

- Ensure that the investigation has identified the contributing risks whose management controls are to be reviewed, or that any newly identified risks are added to the risk register with their respective management controls defined.
- Verify that the corrective actions have been effective following the changes. If not, reassess what needs to happen to ensure effectiveness.
- Make enquiries as to the extent of the injuries to the employee and of the potential of any long-term effects. Evidence that the risk register has been reviewed because of the investigation, with links of time and date of review which match the event that triggered the investigation.
- A review of any further training required is to be completed.
- All staff to be made aware of the event and reason for changes to the policies, processes, equipment and/or the risk register. They are to be given the opportunity to discuss the event, to prevent reoccurrence.

### Non-Notifiable Event Form

### Emergency Plan and Procedures

### **Fire Warden Duties**

If you discover a fire in the building:

- 1. Activate the Alarms.
- 2. Put on your Fire Warden Identifier (Vest, Hat or Arm Band).
- Begin your patrol of the building and instruct all staff to evacuate immediately and proceed to the Assembly Point.
- 4. This is at: \_\_\_\_
- 5. Once you have reached the assembly point, conduct a roll call for the staff in your area.
- 6. Report to the Building Warden.

If the alarms activate without your knowledge, carry out tasks 2 to 5 above.

Your target time for a complete evacuation is a maximum of 2:00 minutes.

The 30 Second Rules are:

- 1. Fire will double in size every 30 Seconds. This is without any accelerants.
- 2. It will take you 30 seconds from the time you discover a fire, activate the alarms, get the correct fire extinguisher and return to the fire.
- 3. 30 seconds is the approximate life of an extinguisher once it has been activated.

Use the Correct Firefighting equipment for the type of fire:

- Type A Wood, Paper, Textiles Use a waterbased extinguisher (Hose or Stored Pressure).
- Type B Liquids (Oil, Petrol, Chemicals) Use a Dry Powder or CO2 extinguisher.
- Type E Electrical Equipment Use a CO2 or Dry Powder (Must be labelled ABE) extinguisher.
- Type F Cooking oil/fat.

Fire extinguishers can be easily recognised by the colour band on them:

- Red Water/water-based
- White Dry powder
- Black CO2 (Carbon dioxide)
- Blue Foams
- Beige Wet chemical

Look for the labels on the fire extinguisher for the type of fire it is most effective on.

Never put yourself at the risk of getting burnt or trapped by the fire.

### Heat + Oxygen + Fuel = FIRE

N.B. Trial Evacuations are to be conducted at 6-month intervals or 6 months from the previous evacuation (real or trial)

### Tsunami

### The following rules apply:

- The Ministry of Civil Defence and Emergency Management will issue a national warning on the television and radio.
- Move inland to high ground.
- Stay away from streams and rivers.
- Never go to the coast.

### **Volcanic Eruption**

The following rules apply:

- Listen to the radio for information and advice.
- Conserve water and save in containers.
- Stay inside as much as possible.
- Wear a mask and goggles if you are going outside.
- If possible, keep clothes worn outside separate from clothes worn inside.
- Avoid basements and or confined spaces as gases can accumulate.
- If possible, keep the roof and guttering free of ash to avoid the roof collapsing under the weight.
- Unless necessary do not leave the building unless advised by Civil Defence Emergency Management officials.
- Turn your electricity and gas off at the mains.

### **Medical Emergency**

The following rules apply:

- Do not move the injured/ill person unless they are in danger of further injury and you are not endangering yourself.
- Have someone get the first aider to attend to the injured/ill person.
- Call ambulance if required.

### Earthquakes

The following rules apply:

- Store heavy items near or on the floor.
- Implement the recognized self-protection process of: "Drop – Cover - Hold".
- Know how to turn off water, electricity and gas.
- Have adequate fire extinguishers for small fires.
- Have a survival kit.
- Treat injuries.
- If you are in a damaged building, try to get outside into an open safe place.

All staff and visitors MUST follow the instructions of the Emergency Wardens during an Evacuation.

### Emergency Personnel and Contacts

EPA	0800 429 7827 www.epa.govt.nz	National poisons Centre	0800 764 766							
Dial Out Prefix		Power Supplier								
Ambulance	111	Gas Supplier								
Police	111	Fire	111							
Local or Regional Authority		Doctor								

First Aiders: Adequate first aid equipment and trained staff are required to be provided by the PCBU.

A guide might be one first aider for every ten staff members/ site crew. Two per 25 workers in moderate risk workplaces.

Assess company size and composition, nature of work, size and location of workplace, level of risk in workplace and assign first aiders appropriately. The first aiders should be chosen based on availability during the week, skills, interest to do so and prior qualifications and experience. They must hold a current first aid certificate.

**Kits required:** at least one in each area of work, including vehicles. At least one on each floor. They must be clearly identified using a white cross on a green background.

### Hazardous Substances

This Business is committed to ensuring full compliance with all hazardous substances requirements and will:

- 1. Keep an **Inventory** Hazardous Substances Register (Policy page 4.6) and ensure that it is readily available in the workplace.
- 2. Use and Share Safety Data Sheets (SDS) formerly referred to as MSDS, these should be sourced from your hazardous substance supplier, at the time of purchase. Read each document and note down important information about each; properties, how to store it, PPE requirements, and first aid information. Anyone who uses that substance must be familiar with the SDS and it must be easily accessible to all staff in the workplace. Document the SDS date on your Hazardous Substances Register.
- 3. Conduct a **Risk Assessment** can you substitute another substance for the same job? How can you reduce exposure to risks caused?
- 4. Inform and Train your Workers complete the **Staff Skill Level Training Sheet** to show this has been done.
- 5. Prepare for **Emergencies** have a plan outlining how you will deal with a hazardous substance emergency e.g. someone is burned or poisoned, a fire or leak occurs.
- 6. Correctly Label Hazardous Substance Containers, including Waste
- 7. Install **Warning Signs** Place signs where substances are used and stored e.g. entrance to property, building and rooms where it is located and used. Signs must be clearly visible and state; hazardous substances present, general type of hazard, what to do in an emergency.
- 8. Make sure **Storage Areas and Containers** are Safe Store only what you need, keep incompatible substances separate, use appropriate containers and label everything clearly. Depending on the substances you use, you may need special storage cabinets and a compliance certificate.
- 9. Take Care with **Hazardous Waste** If waste is hazardous e.g., toxic or corrosive, you must treat the waste in the same way as you treat any other hazardous substance with similar properties. Including: recording it in inventory, correctly storing and labelling, ensuring staff working with it have the knowledge, experience, and supervision to do so safely.
- 10. Provide **Protective Gear** You must make sure workers have the correct clothing and equipment, to use the substance. You must also ensure they know how to correctly use and maintain it
- 11. Ensure that any containers used for **Decanting** or the transfer of hazardous substances are labelled correctly.
- 12. Health surveillance is provided to a worker if there is a significant risk to health from exposure.
- 13. Health monitoring records will be kept in a secure system for at least 30 years.

For further information on hazardous substances refer to <u>www.hazardoussubstances.govt.nz</u>

### 4. Contractors & Subcontractors

### Contractor Management

In general, the HSWA regards the health and safety of all people working at a place or site to be the responsibility of the primary PCBU of that site. This means there should be no distinction between staff, visitors or a person visiting that site for the purposes of their business; be they a cleaner, an air-conditioning technician, or a computer system support technician. Their health and safety on this site is your responsibility.

In the HSWA, it is specifically noted that PCBUs are required to take all reasonably practicable steps to ensure the safety of all non-company people, while on site.

This section sets out the procedures which need to be completed by a PCBU, to ensure compliance with the above Act and Standard. Remember that there is no point in having a contractor sign the Contractor's Acknowledgement if you are not going to then induct them correctly onto the site and regularly monitor and evaluate whether they have complied with the agreement that you have both signed.

### **Contractor Prequalification**

A key step in contractor management is to understand the health and safety competency of our contractors and ensure they have the required systems and capability to keep people safe.

Contractors must complete the Contractor's Acknowledgement document on Page 4.2 before commencing work. They must provide a copy of their own health and safety policy.

When selecting contractors, their Health and Safety practices should be considered, as well as their ability, experience, qualifications, training, work history, costs, etc.

Past Health and Safety performance-based statistics used for assessment might include looking at past three years for the number of safety or environmental violations, lost-time injuries etc.

### **Contractor Minimum Requirements**

Minimum Standards are an agreement between This Business and our contractors, outlining the expectations and the minimum standards we will accept from contractors. This will include adherence to legislative requirements and our health and safety systems and other procedures.

We will use the Contractors Acknowledgement process to ensure the Contractor meets our standards.

### **Contractor Acknowledgement**

Prior to the commencement of any project on a company site this form must be completed, signed and the criteria as stated below must be met. I/we will abide by and follow any health and safety management initiatives implemented whilst working on the site.

When working on another site (e.g., contract work), the Contractor/Sub-Contractor must be inducted to that site by the site Manager/Controller, so that they are made aware of any specific site risks.

### 5. Workplace Induction & Training

### Workplace Induction & Training

### Workplace Inductions

Whenever a person first begins working at this site, whether they be a new employee, an existing employee transferring to this site, a temporary person employed via an agency or a person working on the site as a specialist contract employee (long or fixed term), they must all be informed of the special nature of the site and of the function within the business.

This section does not apply to those people who are working on site as part of their business skills e.g., a plumber making repairs in a bathroom. This is covered in the section entitled "Contractors".

Any worker beginning at This Business must be fit to work.

This task should generally be carried out by a current staff member to whom the new person would report to or work alongside. The HSWA requires that the PCBU ensures that all reasonably practicable steps are taken, to advise employees of any risks that exist or may be created in the workplace during normal work activities, plus any special actions that must be taken in the event of an emergency.

The Inducting New Employees form must be used on every occasion a person begins work at this site for the first time.

### Workplace Training

Effective training is a crucial component of any successful business and part of that effectiveness is recording that training. These records, when fully implemented, cover the requirements of the HSWA.

A training needs analysis should be completed when an employee begins work with This Business and this should be reassessed on an annual basis.

There are two types of training that should be recorded by any PCBU. The first is that of job competency, the other is of training that is associated with an employee's role but may not directly be part of their daily work.

A worker who does not have the relevant knowledge and experience or licence for a role must be supervised by a licenced person whilst work is undertaken.

### **External Training**

### **External Specific Training**

This is training for specialised job-related tasks, requiring certification, licences etc. This training cannot usually be done internally e.g., Height and harness training, forklift, etc.

### **External General Training**

These are the records of training undertaken by staff members that, while not directly influencing the ability of the staff member to do their job, may in part be a requirement of the role e.g., Site Safe Building Construction Passport, Working at Heights, Health and Safety Representative or Workplace First Aid.

We recommend the use of the Training Renewals/Reviews form to record the training certification dates for each worker and each qualification. We also suggest adding these reminder dates to an online calendar or app, with an email alert to ensure this training does not lapse. All training records are to be assessed during each site inspection; this process guarantees all training remains current.

*Competence is the ability to apply knowledge and skills to achieve intended results.* 

### Inducting New Employees

The checklist below is a requirement for the induction of all new employees or existing employees transferring to this site. This is to ensure that all new employees are made aware of any risks they may incur, training that may be required and other information requested before starting in their new position. The employee is not to start work until the checklist has been completed, ticked off and signed by the trainer and employee. Training is to be done by the appropriate supervisor or appointed person.

In the case of working on another site (e.g., contract work), the employee must be inducted to the site they are working on, to be made aware of specific risks by the Site Manager/Controller.

Site							
Checklist	Tick						
A guided tour of the site has been given and introductions to area supervisors and relevant other staff members i.e., the person(s) who will be training them.							
All areas that the employee is required to work in or go to have been identified and all no-go areas have been explained. This includes toilets, lunchroom, and any other area that the employee may be required to use.							
The employee has read the health and safety systems risks relevant to their area and has had the risk identification process explained, and the actions to take.							
Emergency procedures have been shown to the new employee, including the assembly point location. They are aware of their potential role in emergency preparedness and response processes.							
The Drug and Alcohol Policy has been explained to the employee.							
The employee has been made aware of any relevant legislation they need to follow in their position (including Codes of Practice, Acts and Regulations).							
All personal protective equipment (PPE) required to perform the job has been provided and an explanation has been given on when and where it must be worn. Also, how and/or where to get more or replacement PPE as required.							
Incident and Injury reporting has been explained, and the names of first aid trained staff have been given.							
The employee has been made aware of the work injury claims process and rehabilitation responsibilities and procedures.							
The safety meetings process and frequency has been explained and the employee has been introduced to the relevant site safety representatives.							
It has been explained that if they have any health and safety concerns, they can discuss it with either their supervisor or safety representatives.							
Arrangements have been made to provide training for the staff member, until such a time that the trainer is confident that the employee can perform the task in a safe and competent manner.							
The employee has read the policy statement and has been made aware of the PCBU and employee responsibilities.							
The Employee has provided any certificates, licences etc. pertinent to the job he/she is required to do, and these have been added to training renewals/reviews (page 7.2).							
The Employee has been added to the training chart (page 7.4) and will be reviewed and updated as required.							

I have received training in the above areas and have a clear understanding of the points noted.

### This form is for EXTERNAL TRAINING, both specific and general

**Legend**: Note expiry dates in the cell adjacent to the person's name, or use a tick if expiry is not applicable. Level 1 – after 2 - 3 months Level 2 – after 4 - 6 months Level 3 – after 12 months Level 4 – after 2 - 3 years

### 6. Site Inspections

### Inspections

When working on other's sites, an inspection is to be done prior to commencement of the contract, and then completed weekly.

Operating equipment must be inspected prior to use. Please include the pre-use inspection requirements for equipment (mechanical, powered, or portable machinery and equipment).

All non-compliance items identified during the inspection of equipment/machinery must be rectified. Defective or damaged operating equipment and/or machinery shall be removed and/or tagged, quarantined, and sent out for repair or destroyed.

### Site Inspection Checklist

Checklist	*	Checklist	*
General		PPE in Use:	
Computer Workstations		High Visibility Clothing	
Lunchroom/Kitchen		Foot Protection	
Amenities		Hearing Protection	
First Aid Kit		Eye Protection

### 7. Risks & Controls

### Risk Identification, Assessment and Management

An occupational health and safety risk (or hazard) is a combination of the likelihood of occurrence of a work-related hazardous event or exposure(s) and the severity of injury and ill health that can be caused by the event or exposures.

An occupational Health and Safety opportunity is a (set of) circumstance(s) which can lead to improvement of OHS performance.

This Business is committed to the identifying, understanding, and controlling risks in the workplace, including the active management of any existing risks and risks associated with any new or modified equipment, materials, or work processes. This is to be done with the aid of relevant/affected staff, management, suppliers of equipment and contractors (where applicable).

Where specialist advice is necessary, they will be contacted to aid in the process (e.g., noise level monitoring, hazardous substance management). With the aid of these relevant people, significant risks are to be controlled and the process to either Eliminate or Minimise the risk is to be actioned.

The Risk Management Process:

- The top section of the Risk ID form on Page 7.2 is to be completed by whomever first identifies the risk. Fill in the Name, Location and Description of the risk and your Recommendation on what needs to be done (if any), and your Name, Signature and Date.
- 2. Either give the form to the Health and Safety Representative or put in This Business's designated place for completed Risk ID forms. If you consider this to be potentially serious, discuss with your H&S Rep., Manager or PCBU immediately, to determine if immediate action is required.
- 3. The H&S Rep. and/or Manager then investigate the Risk, first assessing the <u>Initial Risk Rating</u> and adding this to the original Risk ID form. The Risk Rating is calculated by considering the likelihood of the incident occurring again and the potential consequences, as illustrated by the formula on page 7.3
- 4. A meeting is required with appropriate staff in attendance, for this Risk ID:
  - An action plan is to be made and added to the Risk ID form, outlining what will be done, by when and by whom. This section is signed off and dated by each person as each action point is complete.
  - Discuss whether this risk shows that new or increased Health Monitoring is required.
  - The meeting also needs to assess whether the issue and any machinery/process changes must be added to the Risk Register. Or any new ones.
  - The <u>Residual Risk Rating</u> is assessed once any changes have been made, and this new rating is added to the register.
  - Signed and dated by the Senior Manager at the meeting, approving the action plan.
- 5. From then until the Risk has been addressed and any permanent changes made, progress on this risk is to be discussed at each staff meeting. And the action points signed off as done.
- 6. The Risk Management Process for this Risk ID form is only complete when the bottom section Risk Management Process Complete has been signed off by a Senior Manager/PCBU.
- 7. All Risks are to be reviewed annually.

### Initial and Residual Risk Ratings

### Initial Risk Rating Assessed on first identifying a risk/change to a risk

**Residual Risk Rating** Assessed after the controls have been applied

The aim is to reduce the risk rating with this process however we must always consider the unexpected. For example, with a Traffic Management control, we initially rate it at Extreme, then this reduces to Moderate after controls have been put into place. This is because we need to allow for uncontrollable events in traffic management situations e.g. drunk driver, so cannot rate it as Low.

### Disclaimer

While all professional care has been taken in the preparation and production of this Risk Register, Industry Standards are continually changing, and Risk Controls used in your industry may alter over time.

Approved by (Senior Manager)	Signature	Date

### Understand the Risk Rating

### Significance of the Risk

The Consequences of a potential risk are rated from Negligible to Severe.

The Likelihood of a potential risk occurring is rated from Rare to Almost Certain.

Consequences	How severely could someone be hurt?	Like	lihood	How likely are the consequences?
Severe	Death or permanent disability	Alm	ost Certain	High Probability of an incident
Significant	Serious injury, hospital treatment required	Like	ly	Likely Probability of an Incident
Moderate	Injury requiring medical treatment and some lost time	Pos	sible	Possible Probability of an Incident
Minor	Minor injury, first aid only required	Unli	ikely	Unlikely Probability of an Incident
Negligible	Unlikely to result in an injury	Rare	е	Rare Probability of an Incident

### **Risk Rating Matrix**

The Risk Factor is calculated by considering the Likelihood of the incident occurring and the Consequences of the possible resulting injury. For example, if something is Likely to happen and the Consequences are considered to be Moderate, then the Risk Factor is High.

Likelihood/Consequences	Negligible	Minor	Moderate	Significant	Severe
Almost Certain	Moderate	High	High	Extreme	Extreme
Likely	Moderate	Moderate	High	High	Extreme
Possible	Low	Moderate	Moderate	High	Extreme
Unlikely	Low	Moderate	Moderate	Moderate	High
Rare	Low	Low	Moderate	Moderate	High

### **Actions Required**

Once the significance of the risk and the appropriate controls have been assessed, the level of required action can be ascertained. This ranges from Extreme (immediate action required) to Low (action within a reasonable timeframe).

Risk Factor	Required Action
Extreme	<b>Immediate action needed</b> . Access to the risk should be restricted until the risk can be lowered to an acceptable level. Short term action may be required, to lower the risk level. Medium and long-term plans are to control the risk to as low-risk as reasonably practicable, using the Hierarchy of Controls.
High	Action needed quickly (within 1-2 days). The task should not proceed unless the risk is assessed, and control options selected, based on the Hierarchy of Controls.
Moderate	Action required this week to eliminate or minimise the risk, using the Hierarchy of Controls.
Low	Action required within a reasonable timeframe (2-4 weeks) to eliminate or minimise the risk, using the Hierarchy of Controls.

### Initial Risk Rating

Assessed on first identifying a risk/change to a risk

Residual Risk Rating

Assessed after the controls have been applied

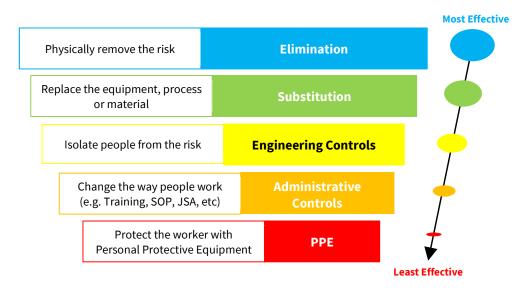

### Controlling the Risk

The hierarchy of controls ranges from the most effective Elimination (removing the risk), through Substitution (replacing the risk), Engineering Controls (isolating people), Administrative Controls (changing work habits), to PPE.

### **Hierarchy of Controls**

### **Monitoring the Control Measures**

Control measures should remain effective, be fit-for-purpose, be suitable for the nature and duration of the work and be implemented by workers correctly. Monitoring the performance of control measures will show you if your control measures are working effectively.

You should: – implement the appropriate means for workers to report incidents, near misses, or health and safety concerns – encourage appropriate reporting – avoid processes that may encourage under-reporting.

You must monitor workplace conditions and worker health so far as is reasonably practicable.

Monitoring can show you if your control measures are working effectively to reduce worker exposure: – Exposure monitoring can be used to find out if workers are potentially being exposed to a hazard at harmful levels. – Health monitoring is a way to check if the health of workers is being harmed from exposure to hazards while carrying out work and aims to detect early signs of ill-health or disease.

Seek the views of your workers and their representatives when making decisions about procedures for monitoring.

The findings of the monitoring are used in the following 'ACT' step to ensure the control measures in place are continually improved.

### **Act: Take Action on Lessons Learnt**

You must regularly review the effectiveness of your control measures at scheduled times. All policies, processes and systems need a regular review date and review/audit process to check they are followed and are still fit-for-purpose.

Investigate incidents and near misses to identify causes and what needs to change to prevent them from reoccurring.

Talk to your workers regularly to check if the control measures are effectively eliminating/minimising work risks.

Use the results of your ongoing worker conversations, reviews/audits, investigations, and workplace/worker health monitoring to help you to continually improve the effectiveness of the control measures.
